

I thoroughly support the FCC requirement of Morse code testing, however, the speeds should be again increased to the by-gone era. 5 wpm, 13 wpm and 20 wpm. I have not recalled the FCC demanding or even asking you to become an amateur radio operator thus, a requirement shall be met or go elsewhere. Morse code is a viable and usable means to communicate within the amateur radio service. Other services are not amateur radio. Retain the code requirement, as is or higher speed. Sending the Morse should also be added to the receiving requirement, perhaps 2 minutes of sending, that's another issue.
